

core/include/2XD2/core
/exceptions/NotInitializedException.h

```
graph BT; A[framework/src/SFMLInputHandler.cpp] --> B[core/include/2XD2/core/exceptions/NotInitializedException.h]; C[renderer/src/Renderer.cpp] --> B;
```

The diagram illustrates a header file dependency. At the top, a grey rectangular box contains the path to a header file: `core/include/2XD2/core/exceptions/NotInitializedException.h`. Below this box, there are two white rectangular boxes. The left box contains the path `framework/src/SFMLInputHandler.cpp` and the right box contains `renderer/src/Renderer.cpp`. Two blue arrows originate from the top-right corner of the left box and the top-left corner of the right box, both pointing towards the bottom edge of the top grey box, indicating that both source files include the header file.

framework/src/SFMLInputHandler.cpp

renderer/src/Renderer.cpp
