

core/include/2XD2/core
/exceptions/NotInitializedException.h

```
graph BT; A[framework/src/SFMLInputHandler.cpp] --> B[core/include/2XD2/core/exceptions/NotInitializedException.h]; C[renderer/src/Renderer.cpp] --> B;
```

The diagram illustrates a header file dependency. At the top, a grey box contains the path to a header file: `core/include/2XD2/core/exceptions/NotInitializedException.h`. Below this, two white boxes represent source files: `framework/src/SFMLInputHandler.cpp` on the left and `renderer/src/Renderer.cpp` on the right. Two blue arrows point from each source file box up to the header file box, indicating that both source files include this header.

framework/src/SFMLInputHandler.cpp

renderer/src/Renderer.cpp
